**SINCE 25 YEARS  
300 INSTALLATIONS  
AROUND THE GLOBE**

## FABRIC INSPECTION SYSTEM

DATALOG - Fabric Inspection System is a Web Based system equipped with state of art Micro Controller based FABRIC INSPECTION TERMINAL (FIT) with Touch Screen Display / User Specific Keyboard that replaces the conventional way of manual recording.

- ▼ Inspector with ease can enter Fabric Defects & Points on the FABRIC INSPECTION TERMINAL (FIT) by gently pressing the pre defined Defect & Points.
- ▼ The system automatically measures & records Fabric Length at which the Defect & Point has occurred using the Shaft Encoder connected to FIT.
- ▼ A Computer connected in IT-Network collects information recorded by inspector on FIT through WIRELESS technology.
- ▼ Web Based Software processes these data from the FIT.
- ▼ Process includes Capturing, Sorting, Storing, Retrieving, Calculating and Displaying various User friendly Reports & Screens.
- ▼ This software is also designed with an unique artificial intelligent logic to generate Automatic Cutting Plan to achieve maximum possible realization from inspected fabric based grading specifications defined by mills.
- ▼ **Automatic Cutting Plan** is displayed in Graph and Text
- ▼ Software comes with inbuilt reports for Monitoring Productivity, Realization and Defect Analysis.
- ▼ Customised reports can be programmed.
- ▼ Users can access these information through web browser based on their access levels from remote locations.
- ▼ System also allows multiple users to access data simultaneously.
- ▼ System can automatically use different Grading Standard for Different Buyer.

## BENEFITS

- ▼ Paperless since Data is being stored on FIT / Computer
- ▼ Error Free recording since entry is on User Specific design
- ▼ Fabric Length is measured automatically using Shaft Encoder and hence 100% accuracy.
- ▼ Point of Defect Occurrence is accurate since length is measured using Shaft Encoder
- ▼ Graphical view of Defect Mapping is generated from system and hence easy for decision making
- ▼ Fabric Classification (Grading of Rolls) is done automatically by system and hence laborious process of Manual Grading can be avoided
- ▼ Automatic Cutting Plan is available from system at the end of a Master Batch Roll in Graph & Text and hence easy to make Rolls
- ▼ Inbuilt Productivity Reports ▼ Inbuilt Realisation Reports ▼ Inbuilt Defect Analysis Reports
- ▼ Reports are in drill-down form, Starts from overview to the deep-root to enable easy and meaningful analysis for the users
- ▼ Easy to Train & Operate
- ▼ Assisted Cutting Terminal - To install the system on Cutting Table to stop the Machine as per the cutting plan
- ▼ Provision for ERP Interface

## OPTIONAL

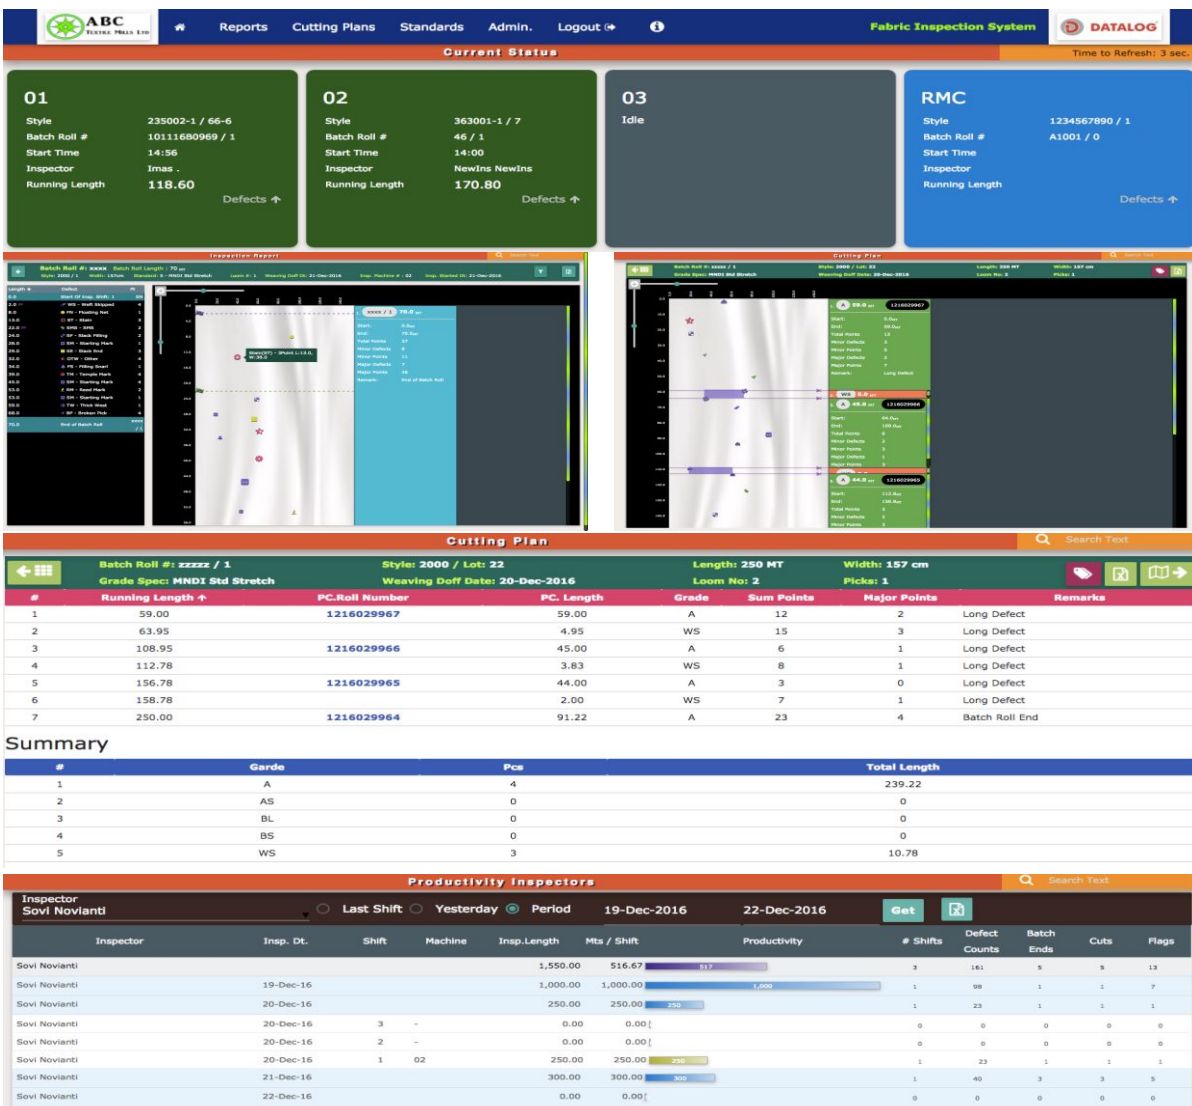

- ▼ Label Printing for each Roll in Text / Barcode
- ▼ Barcode scanner interface for capturing Batch Roll information
- ▼ Weighing Scale interface for Roll weight
- ▼ Audio / Video Indication alerts for the operator

## FEATURES

- ▼ Defect Codes can be customized as per mill requirement using colour and symbol
- ▼ Defect Keys can be Grouped and Coloured as per mill requirement
- ▼ Defect Keys can be Positioned as per mill requirement on FIT
- ▼ Classification of defects with respect to Department available (Weaving Defects, Sizing Defects, etc.,)
- ▼ Fabric Width can be entered at periodical intervals
- ▼ Flags can be marked on the FIT during inspection
- ▼ Long Defects can be entered on the FIT
- ▼ Horizontal Defect Position can be entered on the FIT
- ▼ Recording of Batch Ends / Roll Ends.
- ▼ Option to enter Manual Roll / Piece Cutting by the Inspector
- ▼ Easy to access from anywhere as software is Web - Based
- ▼ Defect Map with Zoom in / out facility

## REPORTS / SCREENS

Users & Permissions | Defects Master | Grading Standard / Specifications | Online Screen for All Inspection table  
 Online Screen for Selected Inspection table | Online Inspection Report | Online Defect Map Report  
 Cutting Plan in Graphical View | Cutting Plan in Tabular View | Productivity Report for Individual Table  
 Productivity Report for Inspector | Realization Report for Individual Table | Realization Report for Style  
 Realization Report for Loom | Defect Mapping Report
